

Standard conversion

Specced to be special

Standard is such an ugly word. All our vans come equipped for an experience most others would consider 'the upgrade'.

It starts with the van

The VW Transporter. Our van of choice. Always sourced from partners we trust (more often than not, VW direct). Always with low mileage. Always inspected and serviced to run as new. Backed up with a full warranty.

From storing to snoring with ease

Our sliding rib bed puts just one thing above your comfort. Your safety. Combine this with its flexible storage options – more boot space on the move, more living space when you arrive – and you have the best bed on the market.

The roof with higher standards

With enough storage for all your bedding when travelling, and enough space for two grown adults when sleeping. They're also M1 crash tested. And there's the option of a zip out canopy for comfortable al fresco dining.

Units unique to us

Designed in-house, our units are engineered from poplar – a wood chosen for its lightweight strength and durability. Enhanced with a hard-wearing melamine finish (in a colour of your choice) and aluminium edges, they look good for the long term.

Delight in the details

Take pleasure in the finer things: LED mood lighting with reflective surfaces; stainless steel splash backs and Corian work surfaces; aluminium tambour doors and blackout curtains. It all adds up to a stylish, but tough, interior.

Equipped for life

With all the things you would expect: leisure battery with USB and 3-pin plugs; external electricity supply with gas habitation certificate; Dometic fridge; and Smeg gas hob and sink.

Here's what you can't see

Not everything special is on show. Each van is generously insulated and sound proofed, has a one-piece floor and strong roof frame, and receives its utilities through copper gas pipe works and clean cable routing.

Specification:

Pop top (white or Black) with bed

Windows front quarters with drivers side slider x 2

Windows rear quarters x 2
